GN S-2 4-8-4, HO

The mighty Great Northern S-2 will make its new Hybrid debut this Fall 2015 and we are quite thrilled about it. Why, you ask? Because this iteration of the S-2 represents our latest technology in Brass-Hybrid manufacturing to date! We hand-solder and compose the body shells of both the locomotive and tender using brass sheet metal and brass detail parts to achieve the most realistic and finely detailed S-2 possible—all while utilizing precision-tooled die cast chassis for both the locomotive and tender to ensure the most reliable and precise operation possible. The end result is a GN S-2 that is far better than any mass produced unit, yet also better than any all-brass unit. A true masterpiece, indeed, at a fraction of the price of brass!

All of the images you see in this announcement are recently taken photos of production units of both the Open Cab version and the Vestibule Cab version. Hand soldering takes an enormous amount of time and skill, which is reflected in the investment required to obtain one of these beauties. But we promise that both the wait and price will be well worth it!
