

Paragon4 N Scale NW2/SW7 Shell Removal Instructions

Tools used here:

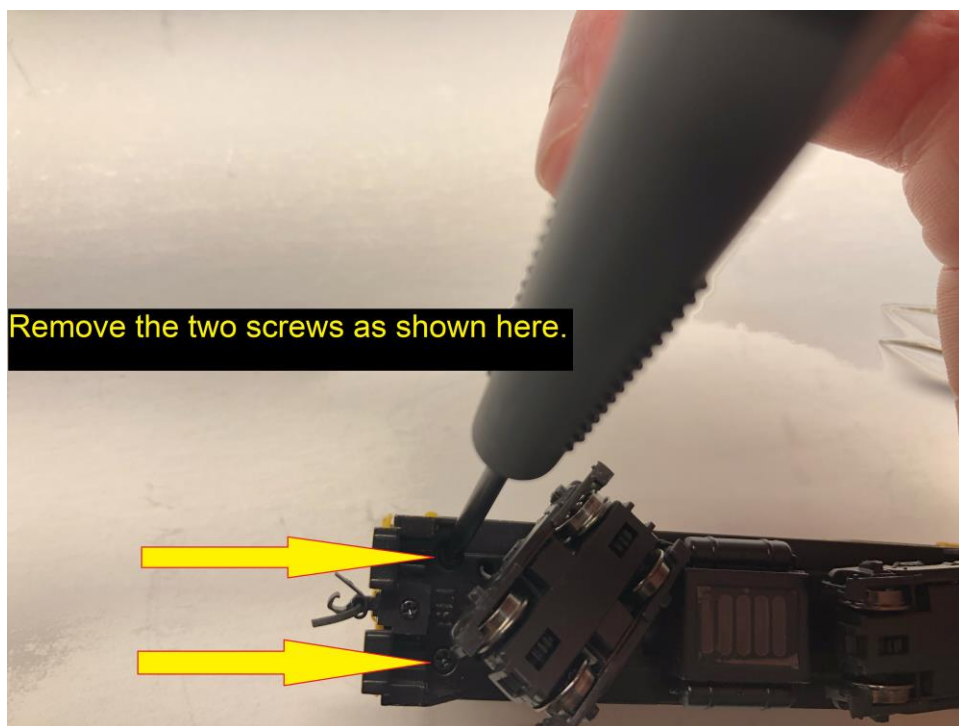

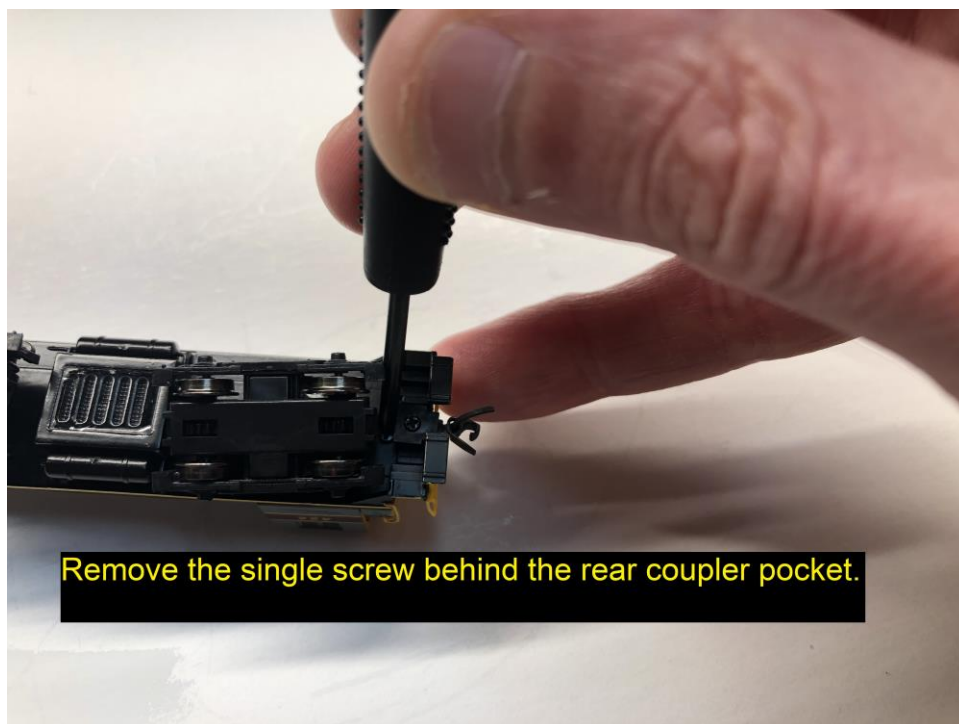

Step 1: Remove the trucks.

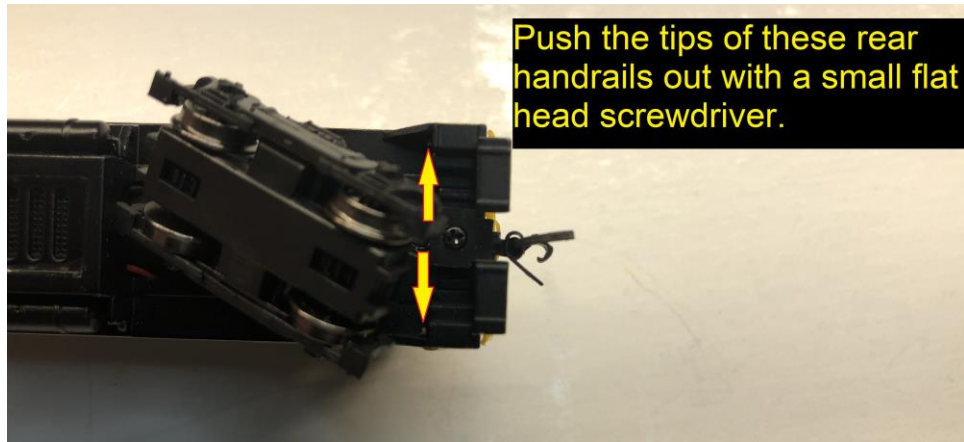

Insert an angled pick or a curved set of tweezers above the truck as shown here, and twist downwards while simultaneously applying pressure inwards.

Step 2: Remove these 3 screws.

Step 3: Remove the lower portion of the rear/side handrails.

After pressing the tip of the handrail from the inside out, you should be able to grasp the handrail with your fingernails or with a set of tweezers and GENTLY lift/pull the bottom of the handrail out of the hole as shown here.

Shell can be removed now, and the decoder can be accessed:

Be aware that there are wires connected to the roof of the shell here. Do not pull the shell so hard that they break.
